

Intercepting and Monitoring Criminal and Terrorist Communications

In order to keep track of criminal and terrorist activities, Law Enforcement and Government agencies monitor communications. In particular, they monitor GSM by means of Cellular Intercept.

Cellular Intercept can acquire both voice and data communications. Voice conversations, using the CC4100 Tactical GSM Interceptor, are acquired off the air without having to connect to the local service provider.

In addition to voice intercept, data attributes are also acquired. SMS Intercept constitutes some attributes, while others intercept of cellular identities, and Phone Tracking technologies.

The cellular identity of a suspected criminal or terrorist phone may provide many layers of forensic characteristics used for Cellular Intercept. Because of the Tactical GSM Interceptor, Police agencies can learn a great deal about enemies being sought. HSS is able to provide the right tools and knowledge needed for Tracking Intelligence users, including Phone Tracking and Locating capabilities. Cellular Intercept is restricted to Law Enforcement and Government users only.

Tracking Intelligence: Training Workshops for Cellular Intercept

In order to meet the needs of Law Enforcement and Government End Users, HSS Development has implemented an informative Cellular Intercept Workshop. With the focus on both standard applications as well as optional capabilities, the C4100 technology can be presented in a manner that is clear to all attendees, outlining the strengths during different types of surveillance operations.

Who may attend?

Typical audiences for the workshops on Cellular Intercept and Tracking Intelligence are generally Government End Users, Law Enforcement Agencies, and authorized procurement groups who resell security technologies to Governments and Municipalities.

Global Frequencies for Interception:
the CC4100 can be configured to capture the following Frequencies:

800 / 850 / 900 / 1800 / 1900 / 2100

The CC4100 can be configured to break the following Encryption levels: **A50 / A51 / A52**

For more information, or to register for a Cellular Intercept Workshop at our European Headquarters or at your Government End User's location, Contact Us.
